1.- **Elipsoide** de semiejes a, b, c :

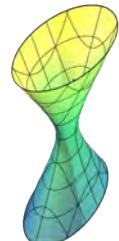

$$\frac{x^2}{a^2} + \frac{y^2}{b^2} + \frac{z^2}{c^2} - 1 = 0 \quad (a = b = c \Rightarrow \text{esfera})$$

Cortando por planos perpendiculares a los ejes resultan elipses.

2.- **Hiperboloide de una hoja**:

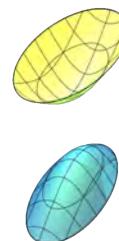

$$\frac{x^2}{a^2} + \frac{y^2}{b^2} - \frac{z^2}{c^2} - 1 = 0$$

Cortando por planos $\perp OZ$ resultan elipses $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1 + \frac{z^2}{c^2} = k, \forall z$

3.- **Hiperboloide de dos hojas**:

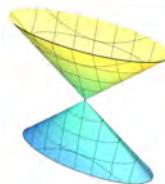

$$\frac{x^2}{a^2} + \frac{y^2}{b^2} - \frac{z^2}{c^2} + 1 = 0$$

Cortando por planos $\perp OZ$ resultan elipses $\frac{x^2}{a^2} + \frac{y^2}{b^2} = \frac{z^2}{c^2} - 1 = k, |z| \geq c$

4.- **Cono elíptico**:

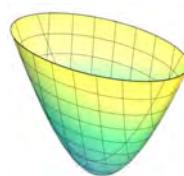

$$\frac{x^2}{a^2} + \frac{y^2}{b^2} - \frac{z^2}{c^2} = 0$$

Cortando por planos $\perp OZ$ resultan elipses $\frac{x^2}{a^2} + \frac{y^2}{b^2} = \frac{z^2}{c^2} = k, \forall z$

5.- **Paraboloide elíptico**:

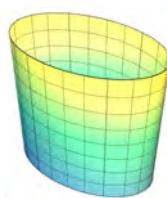

$$\frac{x^2}{a^2} + \frac{y^2}{b^2} - 2cz = 0$$

Cortando por planos $\perp OZ$ resultan elipses $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 2cz = k; \forall z \geq 0$

6.- **Cilindro elíptico**:

$$\frac{x^2}{a^2} + \frac{y^2}{b^2} - 1 = 0$$

Cortando por planos $\perp OZ$ resultan elipses $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1; \forall z$
